

Summarised Friday Sermon

12 DECEMBER 2008

THE APPRECIATION of LIFE – SCIENCE , BIO-ETHICS and the SYARIAH

- Allah s.w.t. as the Creator of the whole universe, has created each creature so that it may be benefited by humanity, in helping them carry-out their responsibilities as caliphs on earth.
- In this current era of information and technological development, various new findings have been presented. Many of these new developments have great potential in helping to solve the issues and challenges facing humanity today.
- Among the types of knowledge which has seen a lot of rapid developments recently is the knowledge of human science and bio-medics. This field of knowledge has the potential to discover the antidote and alternative treatments for various diseases and genetic disorders.
- In analysing the creations of Allah s.w.t, especially in the creation of humankind, we will discover many of His secrets as we study this wonderful and flawless creation.
- Let us become a Muslim community which thinks about Allah's creations. Let us be determined to raise our level of knowledge and develop a generation after us that is always hungry for knowledge.
