

## Summarised Friday Sermon

23 JANUARY 2009

### THE STRENGTH of OUR MINDS ( in the HOLY QURAN )

- Last Friday, we discussed about the value of faith and *iman* in the Holy Quran. Some of the main messages delivered from that sermon was for us to hold on the Quran as a guiding principle in our lives.
- Today, we will discuss about the importance of contemplation, thought and self-introspection, by way of observing Allah's greatness in His creations.
- Allah s.w.t. created humans and have given them many advantages. But the biggest most significant gift which Allah s.w.t. has given to us is the human mind, which works to move us forward towards progress, security and success.
- The advantage which we have in the powerful ability of our brains is what separates us from other creations. When a human uses this ability to seek knowledge and learn to do good, then he is a noble person.
- Let us continue to enliven our thoughts, train our brains, which is a blessing bestowed by Allah s.w.t. to attain all forms of goodness and become a true Muslim who succeeds and gets the best out of both worlds. Amin
